

The LOOK™ Advanced Load Covering Sliding System

IT'S ARRIVED!

Loc'N-Load™

Lock & Tensioning System

Patents Pending

The Industries Best Tensioning Mechanism ever designed for a sliding tarpaulin system has now arrived!

Advantages

No Heavy Tensioning post with ratchets to remove.

"Common to other systems"

No Heavy "A" Frame Tensioning locks to remove

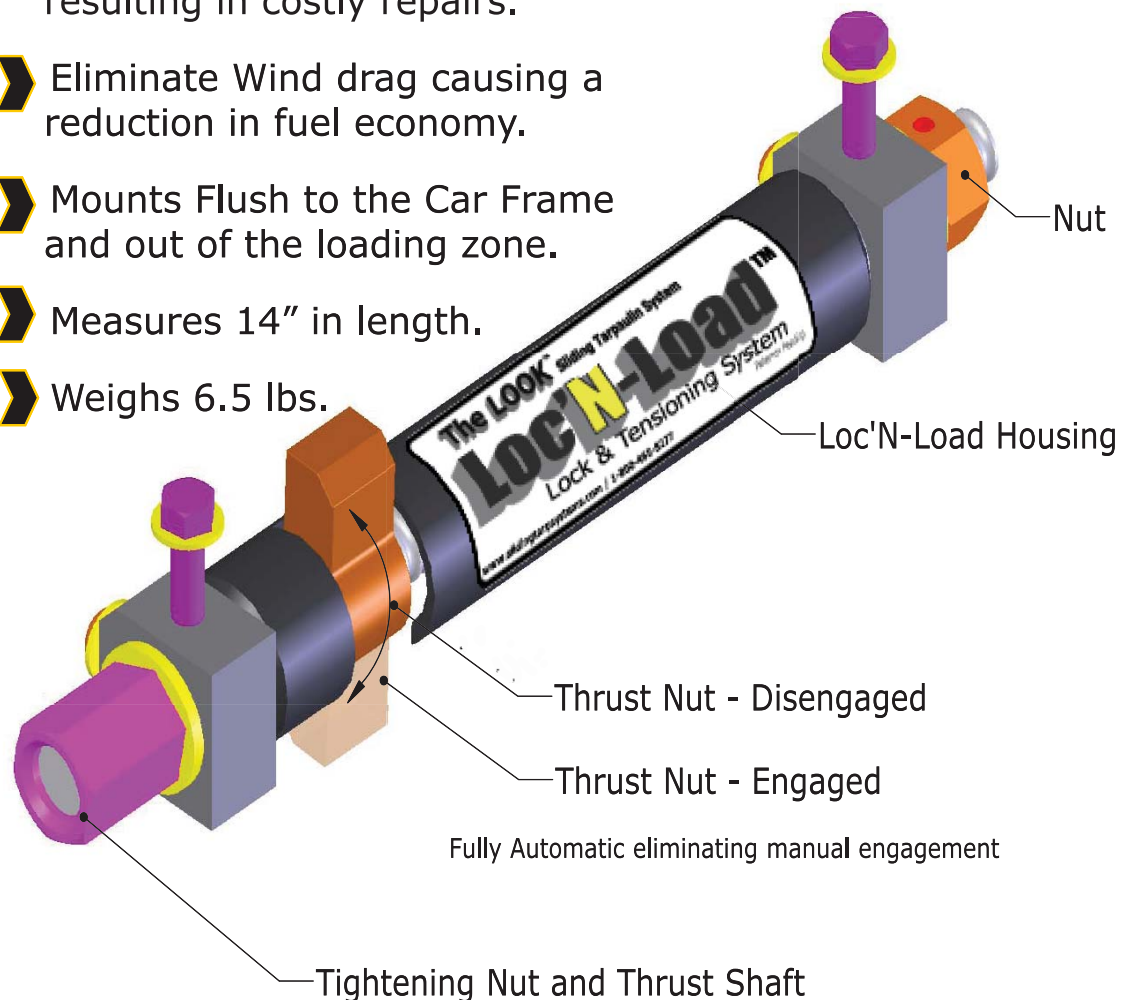

"Common to other systems"

Quick, Easy and Safe to operate

Travels with the System

Fully Operational from Ground Level

- Eliminate Loose Tarps causing unnecessary tarpaulin wear resulting in costly repairs.
- Eliminate Wind drag causing a reduction in fuel economy.
- Mounts Flush to the Car Frame and out of the loading zone.
- Measures 14" in length.
- Weighs 6.5 lbs.

Tarp Technology Innovations set out to design a mechanism that would enhance its sliding tarpaulin system by revolutionizing the ease for which a tarp system could be locked and tensioned from ground level and without being a separate hand held component.

Loc'N-Load™ is the first lock and tensioning system introduced to the industry that is compact, travels with the car frame and does not require the operator to engage or disengage the locking means manually. The operator is supplied with a captive high torque locking ratchet handle making the functionality easy, safe and effortless.

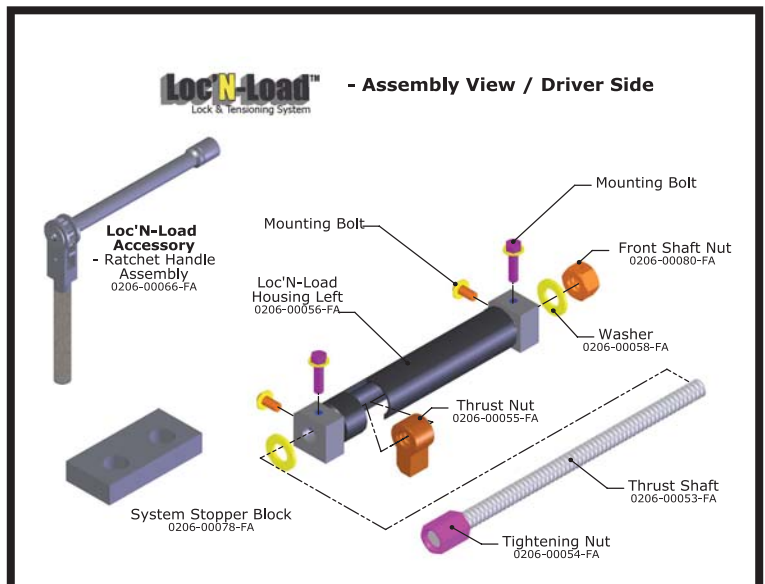

What Makes Loc'N-Load™ Unique?

1. The number one feature is a fully Automatic Thrust Nut which eliminates the need for manual engagement preventing fingers from getting pinched.
2. A built in maximum tensioning feature warns the operator that Over Tensioning is approaching.
3. Its position on the rear car frame allows effortless operation from ground level.
4. Measuring 14" in length and weighing 6.5 lbs Loc'N-Load™ is mounted flush under the car frame keeping clear of the cargo loading area and eliminating any reduction of interior cargo space like most other makes and models.
5. It travels with the car frame eliminating any reason to *remove it, loose it, or damage it.*

What Makes Loc'N-Load™ the perfect Solution?

1. Fully Serviceable with (3) Primary components that can be easily dismantled, i) The Housing ii) Thrust Shaft Assembly iii) Thrust Nut.
2. Replacement Parts are readily available to be couriered quickly and cost effective.
3. Available in easy to install after-market kits.
4. Captive high torque locking ratchet handle making the functionality of the Loc'N-Load easy and effortless.

Don't Stop Here!.....in addition to converting your existing systems to the Loc'N-Load™, lock and tensioning system, contact our service and sales representatives to learn more about other system up-grades which are available to ensure your existing systems receive the full advantage to eliminate loose tarps and costly repairs.
